

Process laser analyzers LGR-ICOS series Model 950

Sensitive, accurate and reliable gas analysis by patented OA-ICOS

Measurement made easy

Flexibility

- Real-time continuous on-line measurements of multiple gases in a single analyzer
- Gases measured include CH₄, CO₂, CO, O₂, H₂S, HCl, NH₃, HF, C₂H₂, H₂O and more (please inquire)
- General Purpose uses and options of Hazardous Area Certifications, such as North American Class I Division 1 or 2, European ATEX Zone 1 or 2, and IECEEx.
- Industry Standard Communications including analog 4 to 20 mA and digital Modbus
- Hazloc-approved USB portal access for file download and field serviceability
- Options for sample line heater module, Hastelloy components and custom spectroscopy applications

Economical to purchase and operate

- Low CAPEX and OPEX provides rapid ROI
- No consumables, columns, carrier gases or liquids, or pre-scrubbers are required
- Simplified sample conditioning reduces system complexity and maintenance cost
- Minimal annual PM requirement estimated at 4 hours

- Continuous analyzer health status reporting and warnings avoid emergency repairs
- Field-serviceable sample cell and mirror cleaning requires no factory repair time

Patented Cavity Enhanced Absorption Spectroscopy

- Significantly higher sensitivity compared with conventional laser analyzers
- Higher accuracy and precision enables improved process and quality control
- Wider dynamic range reduces the quantity of analyzers required
- Fast response time allows rapid adjustment to process changes and upset conditions
- Lack of consumables reduces cost-of-ownership and increases reliability and ROI
- Higher reliability, speed and accuracy over competitive systems that rely on chemical scrubbers

Introduction

The LGR-ICOS™ Laser Process Analyzer performs sensitive, accurate and precise measurements of trace gases in refining, petrochemical, specialty chemical and other industrial facilities. With its highly selective, interference-free and wide dynamic range analytical performance, this analyzer provides very fast, reliable and repeatable results in every application. Where the most challenging of detection capabilities are required for quality assurance, critical process control or the protection of a precious process catalyst from poisonous impurities, no other laser analyzer can match the capability of this analyzer in performance. The LGR-ICOS analyzer is simple to use, starts up in minutes, requires no field calibration and has minimal preventative maintenance requirements.

Every LGR-ICOS analyzer uses LGR's patented Off-axis ICOS technology, a fourth-generation cavity enhanced absorption technique. Off-axis ICOS analyzers have many advantages over conventional TDLAS analyzers including improved sensitivity, precision and selectivity for a wider range of gases as well as significantly improved alignment and vibration tolerance.

The non-critical alignment of the optical bench and sample cell allows for easy service in the field. And, like all ABB process analyzers, the LGR-ICOS laser analyzers are supported by our expert Service and Technical Support staff with access to the analyzer via remote real-time wireless communications for prompt troubleshooting in the field where possible.

Where wireless access is not available, safe and easy file downloads and diagnostic information can be obtained and shared with our technical support experts through a state-of-the-art Hazardous Area certified and approved USB flash drive without the need for Red Tag procedures.

Applications

The LGR-ICOS process laser analyzer was designed for applications that require highest sensitivity, accuracy, precision and response times, including:

- Trace contaminants in inert gases (N₂, Ar, He, etc) for calibration gases and industrial-grade blanket gas
- Trace contaminants in hydrogen for industrial processes and fuel for refineries
- Trace contaminants in ethylene and other hydrocarbon gases
- Monitoring H₂S and CO₂ in fuel gas and natural gas pipelines to reduce corrosion
- EPA-compliant HCl emissions and stack gas monitoring

Ordering information

Please select enclosure type, purge system, AC or DC power, signal outputs and certification.

Please contact your local ABB office to obtain a quotation and additional details on your specific application.

Hardware specifications

General purpose enclosure

Packaging	Single door NEMA 4 IP54 painted steel enclosure: <ul style="list-style-type: none"> — 30 in. (762 mm) wide x 30 in. (762 mm) tall x 15 in. (381 mm) deep, wall-mounted — 15 in. (381 mm) flat-panel HMI display with resistive touchscreen — Weight 190 lbs. (86 kg) 	Analog outputs 4 to 20 mA (all analog outputs are options)	Gas concentration monitors (4 to 20 mA linear analog* signal): <ul style="list-style-type: none"> Channel 1: gas concentration 1 Channel 2: gas concentration 2 Channel 3: gas concentration 3 Channel 4: gas concentration 4 Analyzer warning – fault monitor outputs (4 to 20 mA multi-step signals [20 mA is normal status]): <ul style="list-style-type: none"> Channel 5: temperature warnings and alarms Channel 6: analyzer warnings and alarms
Safety protection	Non-hazardous area installation No enclosure purging or pressurization		*Analog output connection: screw terminals, single-ended pairs 28 to 18 AWG signal wires (1 pair per channel), signal cables through conduit hubs (2 holes available, ½ in. NPT thread size, rated for the installation location).
Purging gas supply	None		
Power entry	AC power input: <ul style="list-style-type: none"> — 90 to 260 V AC, 5 A, single phase, 47 to 63 Hz — Connection requirement: 3 wires, 18-12 AWG, cable through rigid conduit hub or cable gland (¾ in. NPT thread size rated for the installation location) DC power input: <ul style="list-style-type: none"> — 24 V DC, 15 A — Connection requirement: 3 wires, 16-12 AWG cable through rigid conduit hub or cable gland (¾ in. NPT thread size rated for the installation location) 	Remote I / O Modbus TCP: <ul style="list-style-type: none"> — RJ45 connector, cable through a conduit hub (½ in. NPT thread size rated for the installation location) — Transmit all gas concentration values and analyzer warning status (Channel 1 to 6 above) Ethernet: <ul style="list-style-type: none"> — RJ45 connector, cable through a conduit hub (½ in. NPT thread size rated for the installation location) — Remote access for data and analyzer controls 	
Power consumption	100 watts average on continuous run (215 watts at cold start) For heated sample inlet option: <ul style="list-style-type: none"> — 120 watts average on continuous run (260 watts at cold start) 	Local data access	'A' type USB bulkhead port: <ul style="list-style-type: none"> — Dust and waterproof sealing cover — Flash drive NOT included
Sample gas (*heated sample inlet is an option)	Standard configuration: <ul style="list-style-type: none"> — Inlet and outlet ports: ¼ in. tube compression fitting (process compatible) — Sample gas flow 0.2 to 0.5 lpm (depending on analyzer type) — Maximum sample temperature 221 °F (105 °C) for both inlet and outlet ports — 7.25 psig (1.55 bar) pressure limit for both inlet and outlet ports — 104 °F (40 °C) moisture dew point limit Heated sample inlet option: <ul style="list-style-type: none"> — *176 °F (80 °C) moisture dew point limit 	Environmental limits	Ambient operating temperature: -20 to 50 °C (-4 to 122 °F) <ul style="list-style-type: none"> — Analyzer must be sheltered from rain and direct sunlight Storage temperature: -40 to 70 °C (-40 to 158 °F):
		Certifications	  Conformity to applicable EU Directives and Harmonized Standards: <ul style="list-style-type: none"> — 2014/35/EU (LVD), EN 61010-1 — 2014/30/EU (EMC), EN 61326-1
